iii) Garden Pea iv) Chick Pea

Q.2 Answer the following Questions (Any Three):

(6 Marks)

1) Define the term "Genetics and Variation"

→ Genetic variation is a term used to describe the variation in the DNA sequence in each of our genomes. Individuals of a species have similar characteristics, but they are rarely identical, the difference between them is called variation.

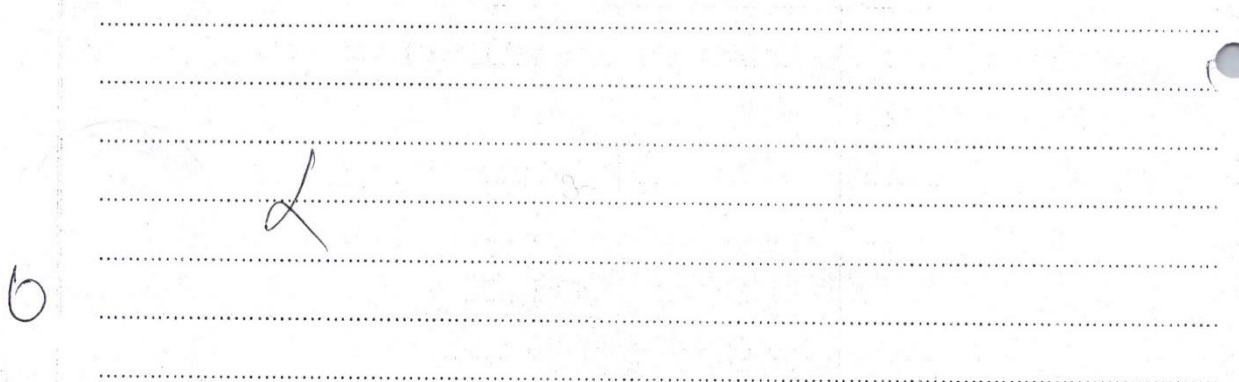

2) What is monohybrid ratio? Give example.

1) In the Mendelian monohybrid experiments, this ratio was always 3:1 (i.e. 75% is dominant & 25% is recessive). For ex. for one of this monohybrid crosses, Mendel selected true breeding homozygous parents showing contrasting characters for the height of the plant.

3) State the Law of dominance and Law of inheritance.

→ 1) Mendel's law of dominance states that in a heterozygote, one trait will conceal the presence of another trait for the same characteristic. The recessive allele will remain "latent," but will be transmitted to offspring by the same manner in which the dominant allele is transmitted. 2) Mendel, through his work on pea plants discovered the fundamental laws of inheritance. He deduced that genes come in pairs and are inherited as distinct units, one from each parent.

4) Give the graphical representation of a monohybrid cross
